Medical infrastructure

18 bed mobile ICU

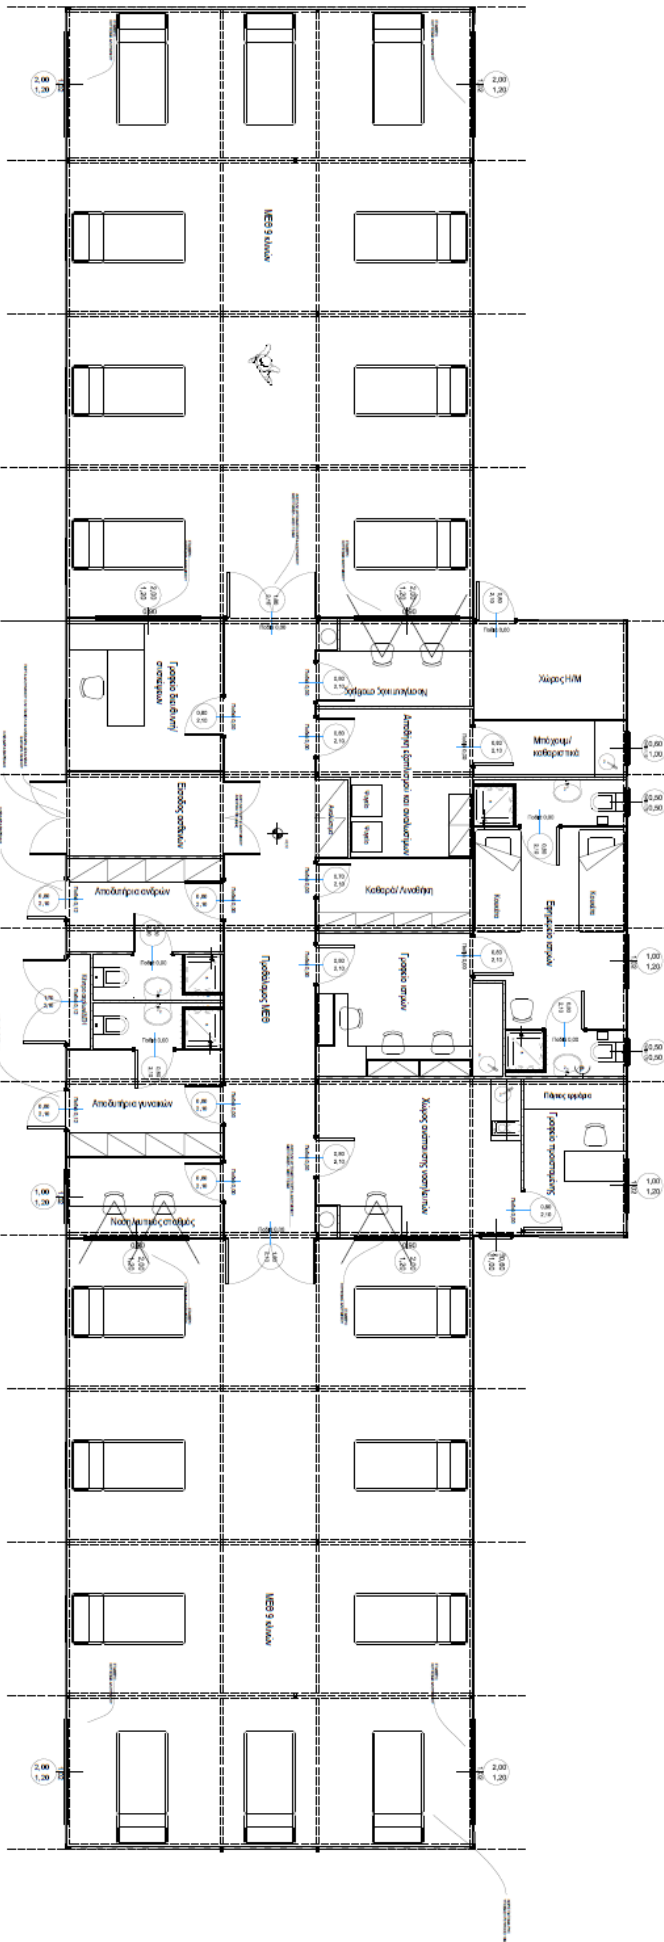

SHORT DESCRIPTION

The project is a donation of the Committee "GREECE 2021" to the Greek State. The project was inaugurated by the **Greek Prime Minister Kyriakos Mitsotakis**. Ms Gianna Aggelopoulou – Daskalaki, Chairwoman of the Committee "GREECE 2021", was also present in the event.

It is a high-standard intensive care unit consisted of many independent prefabricated parts, creating a fully functional assembly. In case of emergency conditions, the portable unit can be transported in any healthcare facility where more ICU beds are required.

BASIC FEATURES

A total of 12 prefabricated houses with a total useful covered area of 324m².

2 independent intensive care rooms (9 fully equipped beds in each room).

Construction of a closed corridor for the interconnection with the existing facilities.

Electromechanical equipment department (air conditioning units, heat pump, medical gas reserves etc).

Autonomous fire detection system.

Integrated network of medical gases.

Independent air conditioning installation (suitable for ICU department).

Each ICU room is air conditioned independently.

Additional heat pump assisting the air conditioning system.

High-tech medical equipment (stable & portable ventilators, infusion pumps, monitors, ultrasound devices, bronchoscopes, defibrillators, portable suction units, capnography amplifiers etc.)

CONSTRUCTION WAS COMPLETED IN JUST TWO MONTHS
